

Work project-wide – not drawing by drawing.

Purge, export, annotate, revise: ASEING PlantPlus handles recurring tasks in Plant 3D projects with dozens to hundreds of drawings using around 100 additional commands **at the push of a button** – traceable, consistent and without putting the project database at risk.

12

tool groups

~100

additional commands

1

dedicated ribbon tab

P&ID · 3D · Ortho

all drawing types

Clean up entire projects

Audit, purge and save across any number of drawings in an area – instead of drawing by drawing by hand. With dry run and log.

Batch export

Export the entire project to plain AutoCAD or output P&ID/ortho layouts as standalone DWG files – blocks exploded, layers and colors clean.

Title block & revision in one dialog

Edit all title block values of a drawing centrally, increment the revision with one click – layouts are then automatically named e.g. A2-Rev002. Stored in the Plant project database.

Centerlines at the push of a button

Select a line, click – done: centerline as lines, polyline or block on its own layer "..._MLinie". Ideal for overviews, routing plans and data exchange.

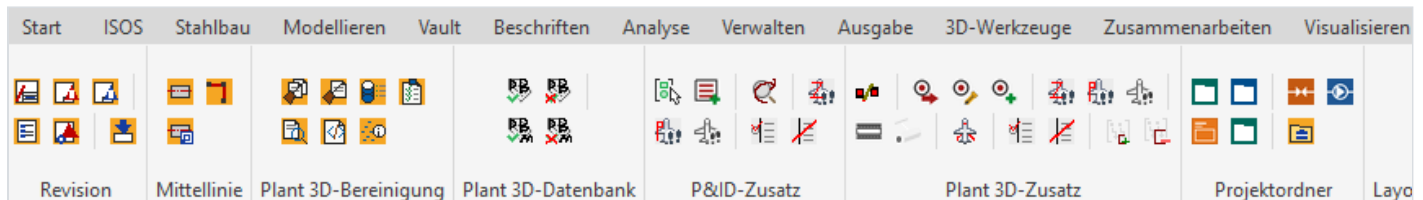

Label ortho views

View names and scales come automatically from Ortho.dcf – consistent on all layouts, even after updates.

Move projects safely

After a project is moved, the path correction fixes all outdated paths in databases and XML – with report, backup and log.

SEAMLESSLY INTEGRATED INTO PLANT 3D

- Dedicated ribbon tab, menu, toolbars and palettes
- Works with the Plant project database, not around it
- Errors are caught instead of crashing Plant 3D
- Loaded automatically – set up at the customer's in minutes
- Logs and backups for every batch run
- Detailed documentation of all commands and options

Your requirement – your extension

Every command in PlantPlus came from a specific request from practice – that is our approach: adapt software to what the user needs in the project. We adapt PlantPlus to your title blocks, numbering and revision rules or develop new tools on commission – in AutoLISP, .NET or Python, tested in your environment and handed over with documentation.

Company license by number of users from €990 net, plus VAT, one-time

	standalone	with PlantConfig Pro
S up to 3 users	€990	€2,990
M 4 – 10 users	€1,990	€4,690
L 11+ users	€3,990	€7,590

1 year of download access incl. new versions

Why by number of users?

PlantPlus needs no license activation and runs on all of the company's Plant 3D workstations. The price is therefore based on the number of Plant 3D users. Customization to your title blocks and rules, and new tools on commission, on request.
